### **Information Disclosure Statement**

An initialed and dated copy of Applicant's IDS form 1449, both A and B, filed August 27, 2003, is attached to the instant Office action.

### ***Drawings***

The drawings were received on August 27, 2003. These drawings are acceptable.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lawrence Bassuk on April 15, 2005.

The application has been amended as follows:

Change Title to: "IC With Serial Scan Path, Protocol Memory, and Event Circuit"

### **Reasons for Allowance**

Claims 1-45 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention pertains to an integrated circuit with a serial scan path, a protocol memory, and an event control circuit. The present invention (claim 27 as the broader independent claim) recites the following features: An integrated circuit comprising: A. functional circuits including an operating bus of plural leads;

B. a serial data input lead and a serial data output lead;

C. at least one serial scan path of scan registers coupled between the serial data input lead and the serial data output lead;

D. a protocol selection memory coupled to the at least one serial scan path, the protocol selection memory having at least one storage location to store a protocol selection signal;

E. an expected data memory coupled to the at least one serial scan path, the expected data memory having plural expected data storage locations for storing signals representing an expected data pattern;

F. a comparator having first inputs coupled to the operating bus, second inputs coupled to the expected data memory, and a compare output;

G. an event control circuit including a protocol input connected to the protocol selection memory, an event input lead coupled to the compare output of the comparator, and an event output lead.

The prior arts of record (US 4,577,318 to Whitacre, et al.), discloses comparing A data on the lines of data set A with B data on the lines of data set B. The lines of A data and the lines of B data are fed to selector multiplexers. The outputs of these multiplexers are fed to an EOR circuit for comparison. A mask register connects to the

selector multiplexers in order to blank out selected input lines to the multiplexers. Mask register has an input bus, which carries the bus control signals from bus control unit, which in turn connects to the D or data bus. The present claims distinguish over the cited art by requiring a protocol selection memory to be coupled to a serial scan path or a serial data input lead and requiring an event circuit to be coupled to the protocol selection memory.

As such, the specified combination of the circuitry within the independent claims are novel such that modification of the prior art of record can only be motivated by hindsight reasoning, or by changing the intended use and function of the prior arts themselves. Therefore, it is not clear that one of ordinary skill in the art at the time of the invention would have made the necessary modifications to the prior arts of record to encompass the limitations set forth in the present application. Moreover, none of the prior arts of record, taken either alone or in combination, anticipate nor render obvious the claimed inventions. Hence, claims 25-45 are allowable over the prior arts of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
